

**TL;DR** Cross-posting isn't testing. A platform-native test plan defines the *unit of comparison* and keeps you from "winning" on the wrong metric (views) while losing on the right one (leads, revenue, retention).

---

## 1 The mistake: treating platforms as interchangeable

TikTok, Reels, and Shorts each reward different behaviours:

- Different discovery surfaces.
- Different retention expectations.
- Different linking/CTA constraints.

So you need a test plan that's:

- **Comparable** (same offer, same audience intent).
- **Platform-native** (execution respects the platform).
- **Measured end-to-end** (not just reach).

## 2 Define the test unit (what counts as "one experiment")

Pick one:

- **Offer test**: same hook + same creative style, different offers.
- **Hook test**: same offer + same body, different hooks.
- **Format test**: same offer + same hook intent, different formats (talking head vs b-roll vs screen capture).

If you don't already have a hook taxonomy, start here:

- [https://instavar.com/blog/creative-hooks/Hook\\_Intent\\_Matrix\\_Designing\\_Hooks\\_That\\_Qualify\\_Leads](https://instavar.com/blog/creative-hooks/Hook_Intent_Matrix_Designing_Hooks_That_Qualify_Leads)

## 3 What to hold constant (so the data means something)

- Offer + audience segment
- CTA
- Posting window (day/time band)
- Caption intent (inform vs persuade)
- Volume (same number of attempts per platform)

## 4 What to vary (platform-native variables)

### TikTok

- First-frame motion and pacing
- Native “storytime” structures
- Comment bait vs value density tradeoff

### Instagram Reels

- Visual polish and brand consistency
- Caption formatting (more skimmable)
- Remix/Collab opportunities

### YouTube Shorts

- Stronger “thumbnail hook” thinking
- Series mechanics (episode structure)
- End screens / long-form handoffs (when relevant)

Shorts-specific linking mechanics:

- [https://instavar.com/blog/funnel-tactics/YouTube Link Funnel End Screens Info Cards and Shorts](https://instavar.com/blog/funnel-tactics/YouTube_Link_Funnel_End_Screens_Info_Cards_and_Shots)

## 5 The minimum dashboard (to avoid false wins)

At minimum, track:

- 3s / 5s hold rate (hook strength)
- Average watch time (pacing/body strength)
- Click-through rate to landing (handoff strength)
- Landing conversion rate (message match)
- CPA / ROAS (if paid)

To instrument this properly:

- UTM conventions: <https://instavar.com/blog/paid-analytics/2025-UTM-Naming-Convention-for-Social-Ads>
- Analytics dashboard: <https://instavar.com/blog/paid-analytics/2025-Social-Media-Analytics-Playbook>
- True impact framing: <https://instavar.com/blog/paid-analytics/True-ROAS-Incrementality-First-Paid-Social-Measurement>

If you want a simple way to generate clean UTMs:
